Students

01 Check Attendance (Phone)

02 Check your info @excel (ID, Name, Email)

03 Create an email (recommendation: gmail)

Things to do today

01 Contents of C course to learn during the semester

02 Course evaluation

03 Development environment & setup

04 Make the first program with C

Contents of C course to learn during the semester

Week	Contents	
Week 1	Development Environment	-
Week 2	Ch.1 Programming Concept	Quiz
Week 3	Ch.2-3 Process & Components	Quiz
Week 4	Ch.4 Variables and Data Types	Quiz
Week 5	Ch.5 Formulas & Operators	Quiz
Week 6	Ch.6 Conditional Statements	Quiz
Week 7	Ch.7 Loop Statements	Quiz
Week 8	Ch.8-9 Functions	Midterm
Week 9	Ch.10 Array	Quiz
Week 10	Ch.11 Pointers	Quiz
Week 11	Ch.12 Characters & Strings	Quiz
Week 12	Ch.13 Structure	Quiz
Week 13	Ch.14 Using Pointers	Quiz
Week 14	Ch.15 File	Project
Week 15	Ch.16-17 Preprocessor and Dynamic Memory	Final

Course evaluation

* Grades are determined based on absolute evaluation.

Course evaluation	Distribution of points	Note
Attendance	20 points	by school system
PBL May change later!	20 points	Practices (Almost every week)
	5 points	Mini Project
	5 points	Contribution & Attitude
Midterm exam May change later!	20 points	Quizzes (Almost every week)
Final exam	30 points	- Write down what you studied on 2 sheets of A4. - For the final exam, most of the multiple-choice questions will be based on the quizzes. For the written-response questions, you will need to understand the exercises and activities we worked on during class.
Total	**100**	

Assignment and Project Submission Policy

All assignments and projects will be distributed through **GitHub**. (github.com)

Students must create their own **GitHub account & a Repository for our class** and become familiar with how to use GitHub. If you are new to GitHub, please use online tutorials, websites, or YouTube videos to learn the basic GitHub workflow.

Submission Rules

- You must **write your own source code** for all assignments and projects.
- All source code must be submitted through **GitHub by the specified deadline**.
- Assignments submitted **after the deadline will receive a 50% grade penalty**.
- If copied code is found, the assignment will receive a **50% grade penalty both**.

Please make sure that you understand how to use GitHub and submit your work before the deadline.

Quiz: Kahoot Rules

1. 8 questions every week.
2. Choose **the correct answer as quickly as possible**.
3. **Correct + Faster = More points!**
4. Use your ID when joining.
5. Your Kahoot scores will be accumulated for 15 weeks.
6. Your total Kahoot score will count for **10~20 points of your final grade**.
7. Have fun and do your best! 🏆

PBL: Practice

DMOJ Account Setup — Please complete before our next class

1. Go to http://61.81.98.89 and click Register in the top-right corner.
2. For your Username, use your student ID number (not a nickname).
3. Enter your name, a valid email, and choose a password.
4. After registering, click the link for your own section only:

   - Section C1: http://61.81.98.89/organization/c-2026-fall-c1/join
   - Section C2: http://61.81.98.89/organization/c-2026-fall-c2/join
   - Section C3: http://61.81.98.89/organization/c-2026-fall-c3/join

PBL: Practice

Join today's contest

1. Log in, then click CONTESTS in the top menu.
2. Find the contest for your section (e.g. "Week 1 Practice - C1") and click on it.
3. Click the Join button. You must click Join to see the problem — the contest will not appear if you're in the wrong section.
4. IMPORTANT: The contest runs for a fixed 30 minutes for the whole class. If you join late, you do NOT get extra time — join as soon as class starts.

PBL: Practice

Solve and submit (Start 11:00 AM)

1. Once inside the contest, you'll see the problem (P1 - Self Introduction).
2. Click Submit, choose C as the language.
3. Write a program that reads a name and prints: Hello! My name is <name>.
4. Submit and check your result — it should say AC (Accepted) if correct.

Work with C: VSC (Editor), github(Storage)

1. Use the development environment on the classroom computer.
   - VSC + Mingw64 + Disable Virus checking

2. Use the development environment o your personal note PC.
   - VSC + GCC (Mingw64 for windows ONLY)

3. Use the online development environment.
   - GitHub Codespaces

Development Environment & setup

Recommended not to use wifi

01 Chrome & Google drive (Optional)

02 Github

03 IDE (VS code) & **MinGW**

https://code.visualstudio.com/

04 Make the first my program

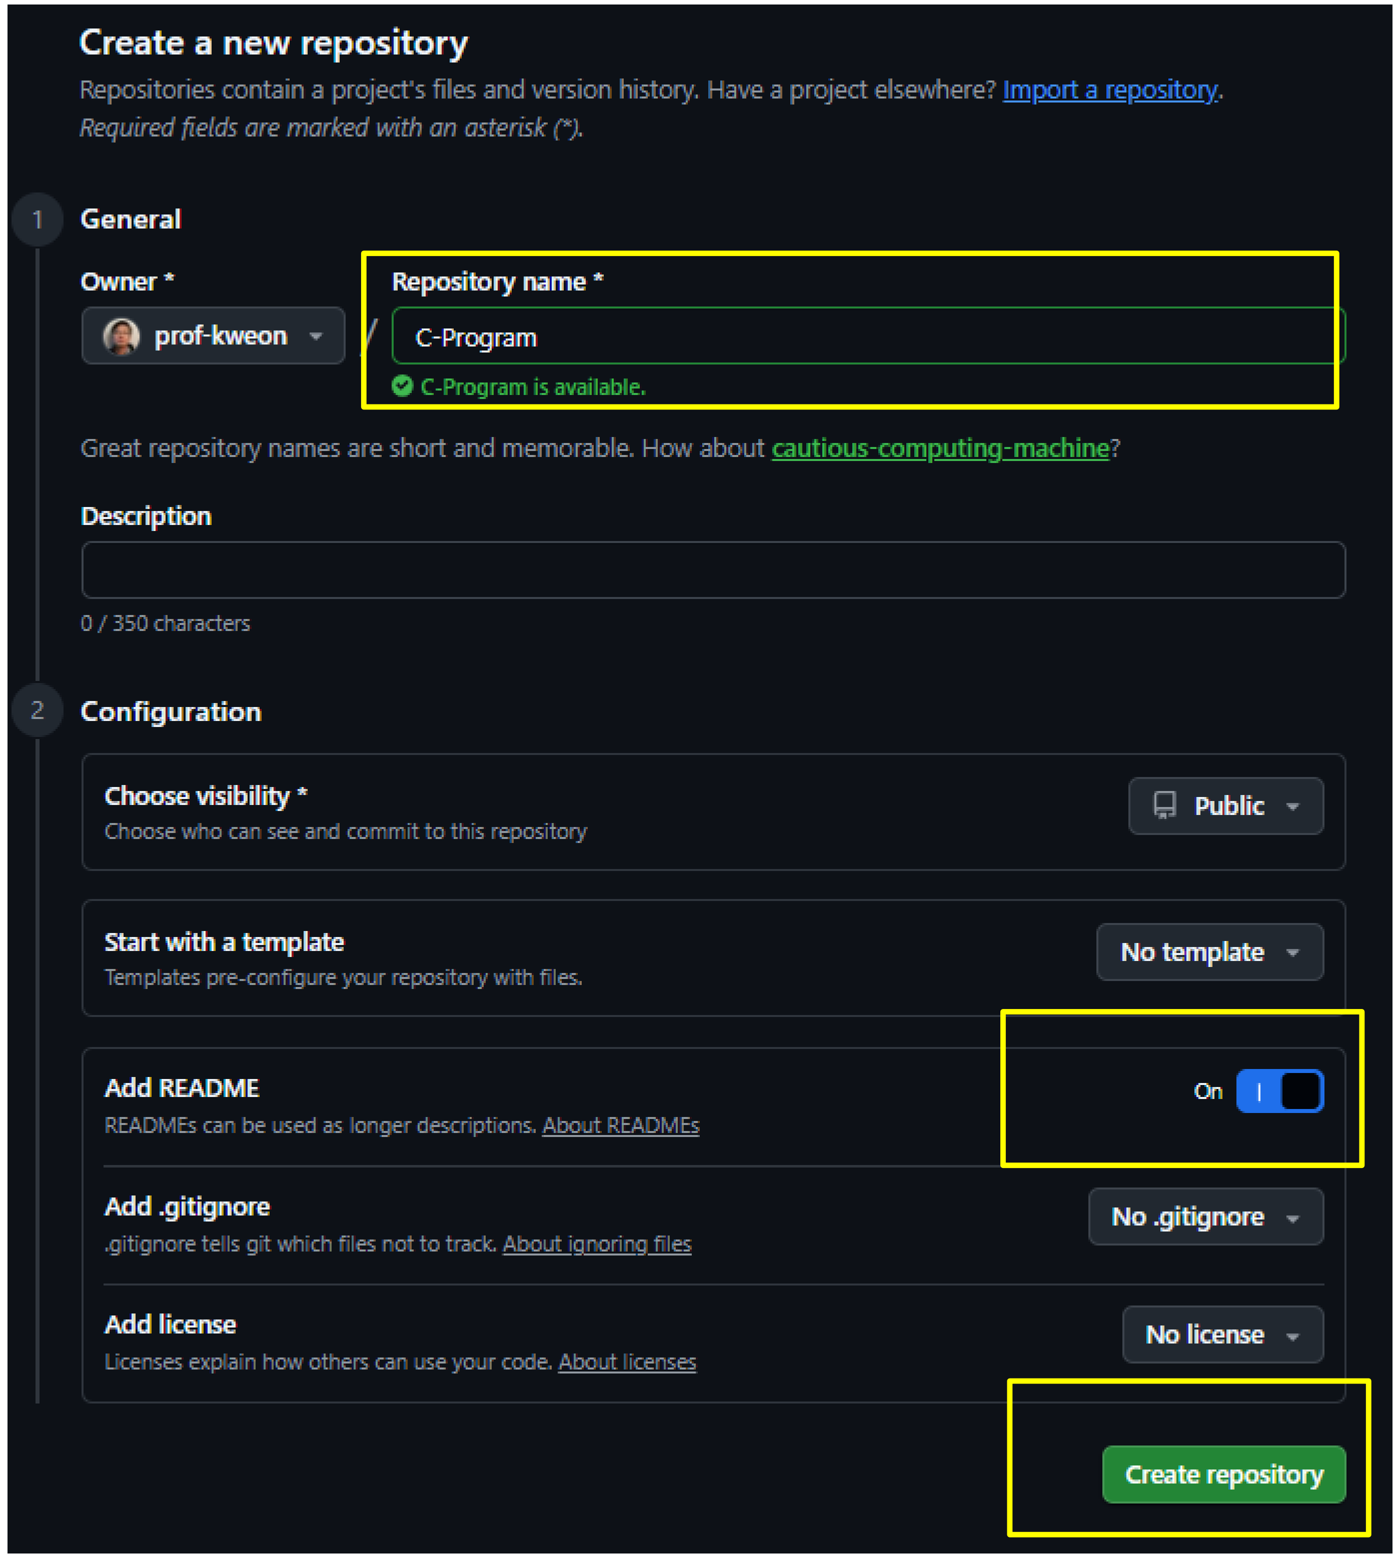
Development Environment & setup – Github

01 Make an account

02 Create a repository

03 Create two repositories as public

1. Repository Name
2. Add README >> On
3. Create repository



Development Environment & setup - **MinGW**

01

Doweload MinGW.zip from woosong LMS in proper directory
https://smart.wsu.ac.kr/mod/ubboard/view.php?id=1077382
Extract zip into c:\mingw64

02

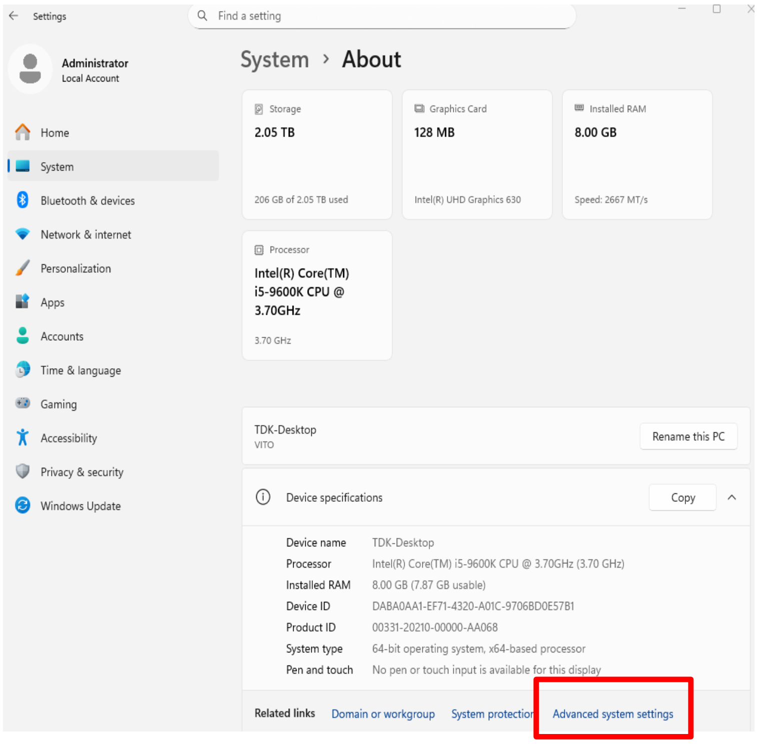
“Setting" > “System" > “About" > “Advance System Setting” > "**Environment** Variables" > "**Path**". and **add** the directory to the end of that string. **“c:\mingw64\bin”**

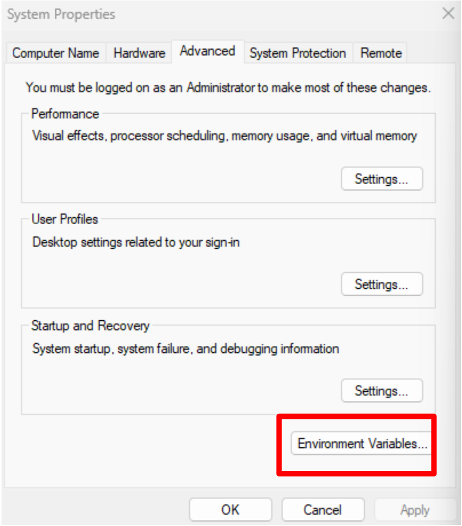
03

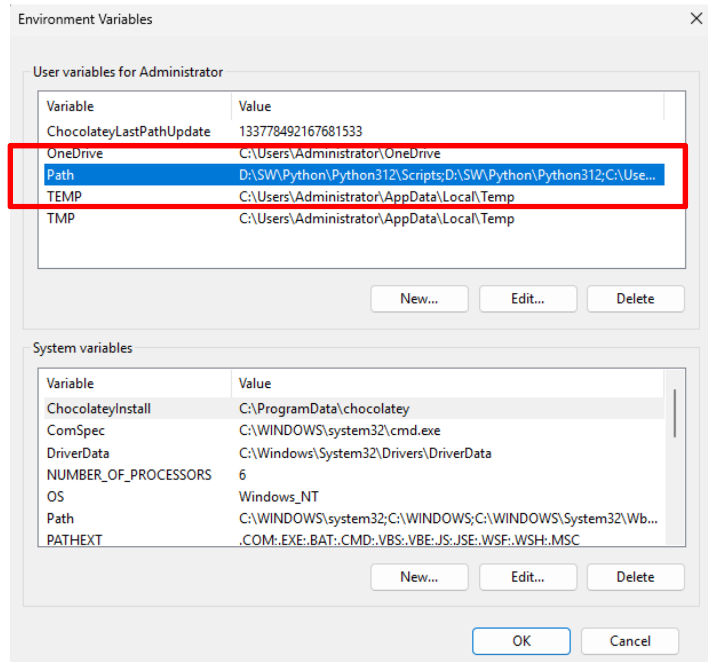
Open a terminal “cmd”

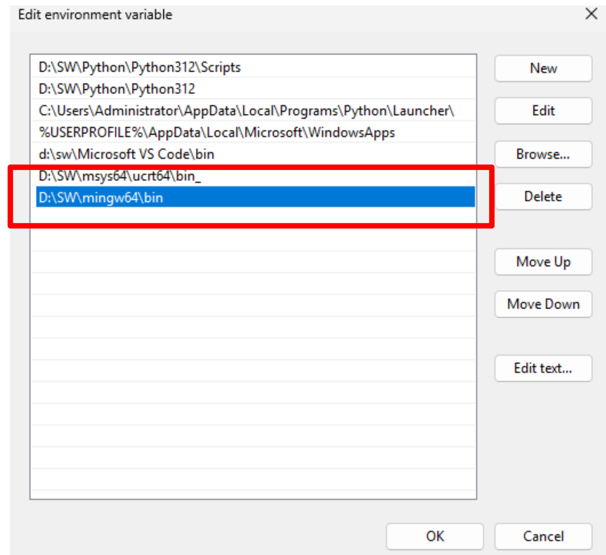
04

Type “gcc –version”









Development Environment & setup - IDE (VSCode)

01 Install VSCode

https://code.visualstudio.com/

02 Connect VSCode

Open Folder > Select Your Working Folder

03 Create main.c

Install C/C++ Extension Pack & Restart C/C++

04 Verify installation > Build your first program

Open “Terminal”

Development Environment & setup - Make the first my program

01 @ windows cmd console

02 @ VSCode (with your notePC)

03 @ Codespaces (in the class)

Write the first my program

main.c

```
#include <stdio.h>

int main() {
    printf("Hello world!\n");
    return 0;
}
```

Build the first my program

Use the -c flag with gcc to compile the source code into an object file without linking.

gcc –c main.c => main.o

gcc main.o –o my_program => my_program

If you don’t need an object file and just want an executable, omit the –c flag and use –o flag.

gcc main.c –o my_gragram **=> my_program**

Practice (github -> codespaces)

Section: C-001
ID: 20260000
Name: Bob Kim
Introduction: I am ….

See you next week!
