Things to do today

01 Lecture Notes (Ch.11)
- Pointers

02 int a; int *a;

03

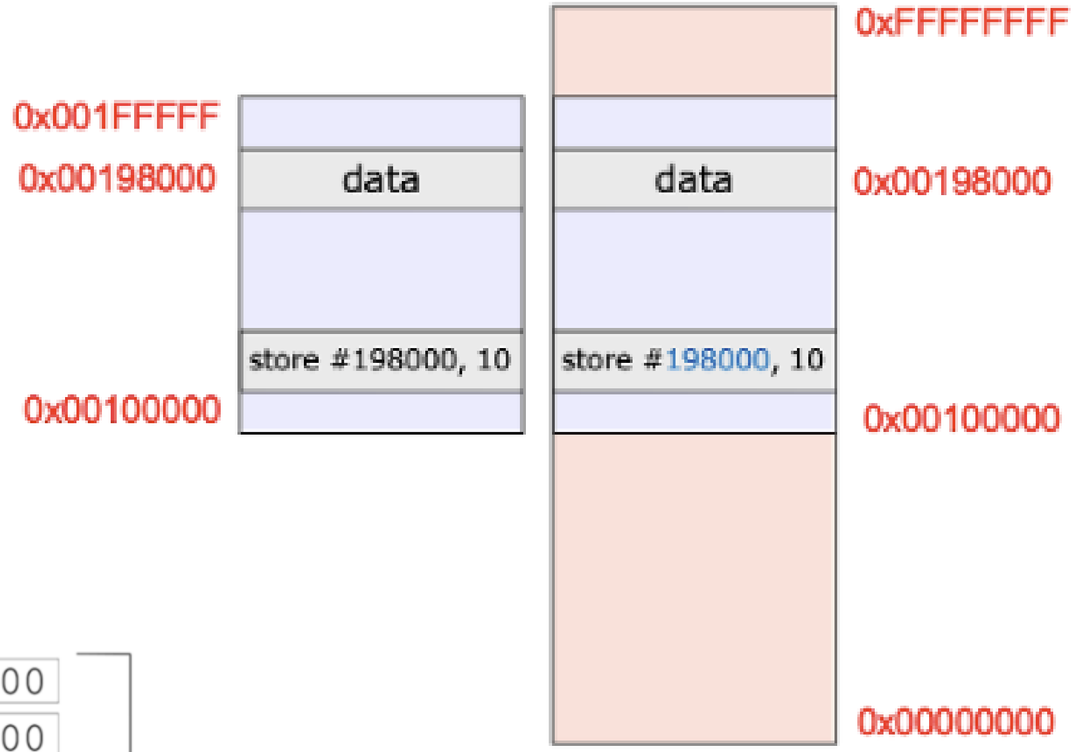

A pointer represents an address

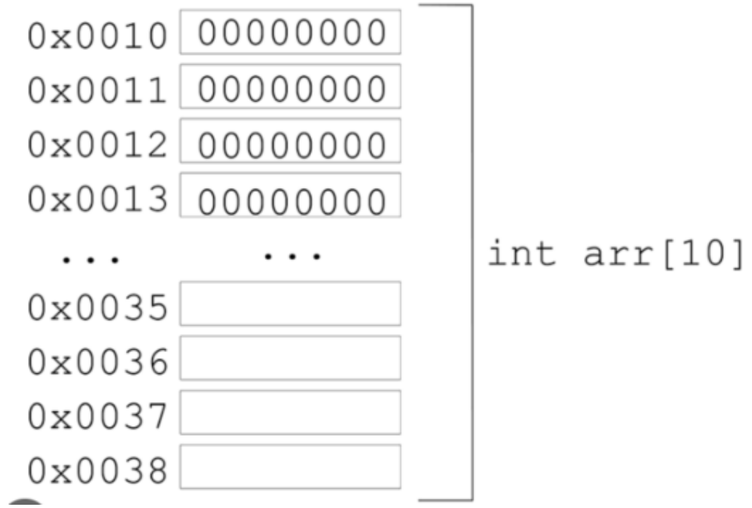

- Compile time

```
void func( )
{
  int data;

  ...
  data = 10;
  ...
}
```

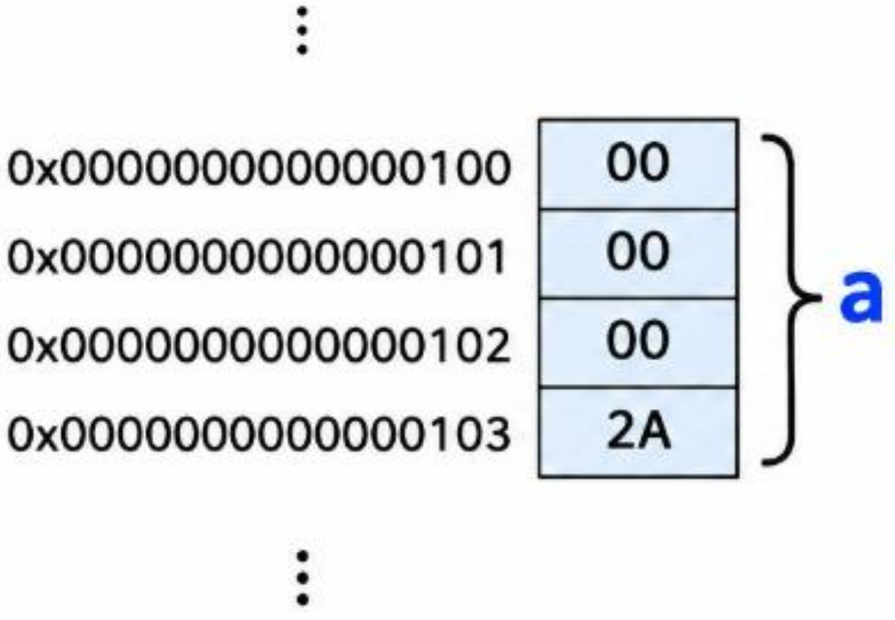

int a

- a is an **int** variable that stores an integer value.
- Size: 4 bytes

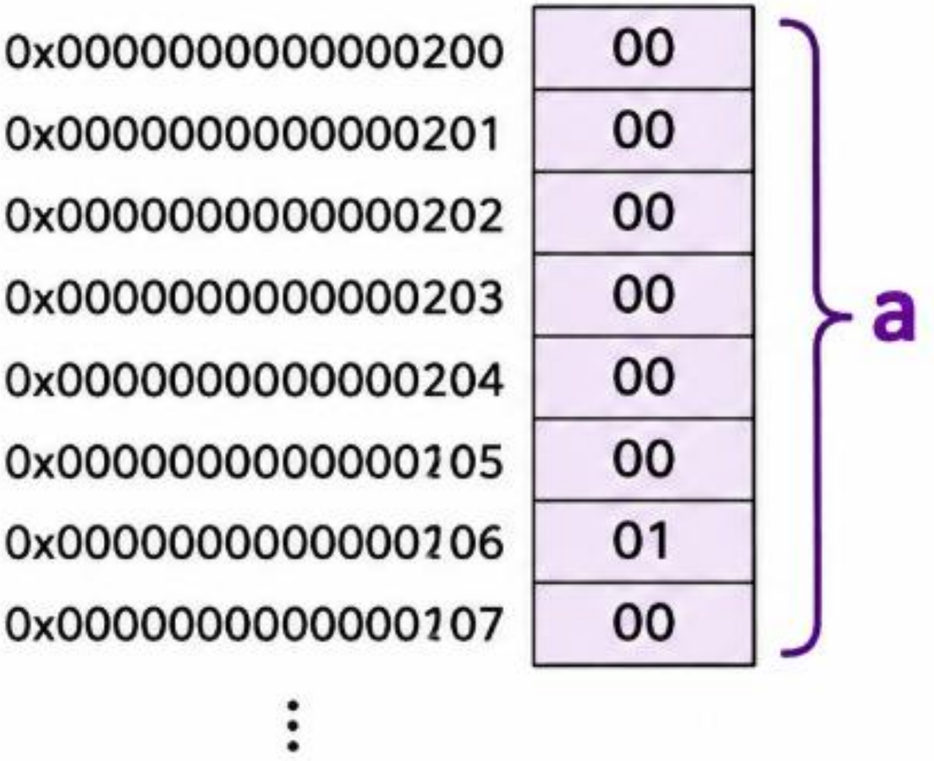

Memory (example: a = 42)

int *a

- a is a pointer to **int**, which stores the memory address of an **int** value.
- Size: 8 bytes (on a 64-bit system)

Memory (example: a = 0x0000000000000100)

See you next week!
DO NOT miss the classes
